Advanced Image Display

The Advanced Image Display extension allows you to show active color swatches and thumbnails with image rollover.

The illustration below describes how the Advanced Image Display extension works.

A customer is searching your online store for a hooded sweater...

...but he can't decide which color would look best.

Advanced Image Display will allow the customer to see the sweater in the desired color by simply rolling over the color thumbnail- <u>making shopping easier for him</u> and <u>increasing profits for you</u>.

**Go Green.
Go Paperless.**
