Alert MRP

With the Alert MRP extension, notifications in SAP are sent automatically whenever you need to make buys or make standard or custom production builds, reducing lead times and inventory errors.

The drawing below describes one of the ways you can benefit from implementing Alert MRP.

A customer makes a purchase, and sales order is entered.

SAP tracks your inventory.

An alert in SAP immediately notifies you when you need to restock and run production orders.

**Go Green.
Go Paperless.**
