- Report scheduling and report books
- Technology based on XML and Microsoft .Net standards
- Reporting on complex ERP databases simplified using meta data descriptions
- Integrated to Advanced Executive Dashboard module

The Ultimate Excel-based Budgeting Tool

With the combination of your Microsoft Dynamics ERP system and XL Reporter's Excel-based budget forms, you have everything you need to run an effective and structured budgeting process. When using XL Reporter for budgeting, actual figures and budget figures are kept in your ERP database, thus giving you the efficiency of one single tool, XL Reporter, for both budgeting and forecasting as well as all your reporting.

Budget Forms & Packages

With XL Reporter, you build your own budget forms in Excel, exactly the way you want them to look. You can also bring actual figures directly into the input forms, thus giving users a more qualitative foundation for their budgeting. Budget forms can be assembled into budget packages, which are then distributed to the individual budget user for data entry.

Distribution and Input

XL Reporter provides scheduling and automatic distribution of budget books by e-mail. The only software the end-users need in order to input budget figures is Microsoft Excel.

When the users have finished their budgets, the completed Excel workbook is returned to the budget administrator. Next, this person can

review, approve, and with the click of a button, save the budgets directly to the ERP database, and then proceed to run reports and analyze the information in various ways.

Reporting

By that very fact that the budget figures are stored directly in the ERP database, they are immediately available for reporting and analysis. And, because XL Reporter is both a reporting tool and a budgeting tool, you can of course use all the reports that you have already defined for your financial reporting. You do not have to worry about transferring and balancing data between multiple data sources, or recreating reports from one system to another.

Realize your budgeting potential with XL Reporter!
